EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Roger Lee on November 1, 2005.

The application has been amended as follows:

- 2. Replace Claim 9 with - An optical compensatory sheet comprising a transparent support and an optically anisotropic layer, wherein the optically anisotropic layer is formed from liquid crystal molecules and monomers having four or more double bonds, wherein said monomers are polymerized to form a cross-linked polymer in the optically anisotropic layer, wherein the transparent support has a retardation value in plane in the range of 0 to 50 nm and a retardation value along a thickness direction in the range of 70 to 400 nm, wherein the transparent support is a cellulose acetate film comprising cellulose acetate having an acetic acid content in the range of 59.0 to 61.5% and wherein the cellulose acetate film contains an aromatic compound having two or more aromatic rings in an amount of 0.01 to 20 weight parts based on 100 weight parts of cellulose acetate. -
- 3. The following is an examiner's statement of reasons for allowance:

The closest valid cited prior art of record US 6,262,788 fails to teach or suggest, even in view of US 5,747,121 and US 5,663,310, the combination of an optical

compensatory sheet comprising a transparent support and an optically anisotropic layer, wherein the optically anisotropic layer is formed from liquid crystal molecules and monomers having four or more double bonds, wherein said monomers are polymerized to form a cross-linked polymer in the optically anisotropic layer, wherein the transparent support has a retardation value in plane in the range of 0 to 50 nm and a retardation value along a thickness direction in the range of 70 to 400 nm, wherein the transparent support is a cellulose acetate film comprising cellulose acetate having an acetic acid content in the range of 59.0 to 61.5% and wherein the cellulose acetate film contains an aromatic compound having two or more aromatic rings in an amount of 0.01 to 20 weight parts based on 100 weight parts of cellulose acetate. Specifically, the limitation of "wherein the cellulose acetate film contains an aromatic compound having two or more aromatic rings in an amount of 0.01 to 20 weight parts based on 100 weight parts of cellulose acetate" is not taught by any of the three references. US 6,476,892 has been invalidated as prior art by the terminal disclaimer and common ownership at the time of the present invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
